

508 Compliance Scorecard

Problems during initial testing:

Global:

1. Login Module reported a missing form label on the field "User Name".
2. A few pages reported missing form labels or table headers.

Bugs:

Login Module

1. Login Module was producing an error during initial testing due to a missing form label. This was causing at least one error to be present on every screen. Developer added in the missing form label.

Admin Product Management page

2. Missing form labels from Admin Product Management inventory page (in addition to missing form label from Login Module which affects every page)

Compare List

3. Reported empty table header (in addition to missing form label from Login Module which affects every page)

My Account Page

4. Reported empty table header (in addition to missing form label from Login Module which affects every page)

Improvements:

All bugs were reported to developers. They added in missing form labels and table headers where applicable.

Tester Comments 2/23/2017:

-The initial testing that I have done was to just pick on very obvious issues using Chrome Wave plug in. It just highlights what might be wrong. I noticed a few issues such as empty table headers and missing form labels.

Tester Comments 2/27/2017:

-I have rechecked the entire site using the WAVE web accessibility tool and looks like the developer has fixed all the previous issues and the site is now reporting zero bugs.

Tester Comments 3/1/2017:

-At the moment I am testing with JAWS 16 screen reader in Chrome. It performs fairly well so far. I do not see major issues.
